

Work Order Processing PM_WO_300

Work Order Processing PM_WO_300

Use the **forward** button below () to advance through the slides.

Prerequisites and Roles

- Prerequisite
 - ♦ UK_100 IRIS Awareness & Navigation
 - If you have not completed UK_100, please do so prior to taking this course.
- Roles
 - ♦ This course is primarily intended for all Plant Maintenance managers, supervisors, and workers who will process work orders will take this class.

Work Order Processing PM_WO_300

Course Content

- Setting the Training Environment – Activating GUI-XT
- Unit 1 – Work Planning Overview
- Unit 2 – Work Orders Overview
- Unit 3 – Creating a Work Order
- Unit 4 – Changing Work Orders
- Unit 5 – PM Materials
- Unit 6 – Work Order List Displays

Course Assessment

- There are **two** parts to the Work Order Processing assessment which must be completed successfully prior to receiving credit for this course.
- **Part 1 – Check for Understanding:** This is a series of questions which will be presented at the end of each unit. To complete:
 1. Click on the radio button next to your answer  is the easiest.
 2. Click on the **Next** button 
 3. Repeat Steps 1 & 2 for each question
 4. After answering all of the questions, click on the **Submit All**  or **Submit All Answers**  button
 5. Upon passing, click on the **Finish** button to continue to the next unit in the course 

Work Order Processing PM_WO_300

Course Assessment (Continued)

- **Part 2 – Work Order Processing Assessment:** This is the hands-on portion of the assessment which you will perform in the Training Sandbox. Further information on this part of the assessment will be given to you at the very end of this course.

Work Order Processing Practice Guide

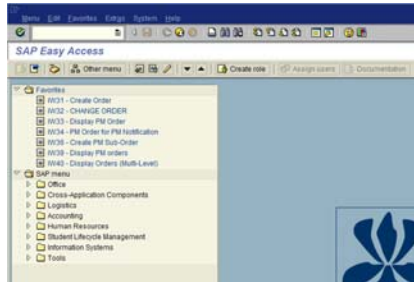

- As noted at various points in this course, the Work Order Processing Practice Guide is available should you want to practice the various transactions discussed in this course.
- **The guide is optional and not a requirement for completing this course.**
- To access the guide:
 1. Click on the **Attachments** link () in the upper-right corner of this screen
 2. Click on the **Work Order Processing Practice Guide** link (the guide will open in a separate browser window)
 3. Print the guide
 4. Follow the instructions listed in each exercise

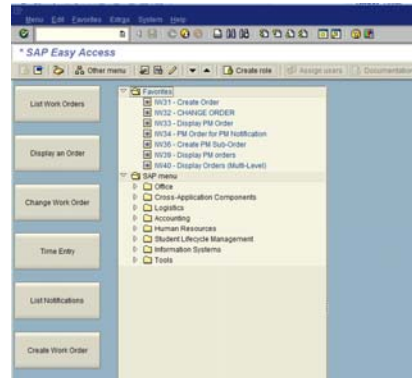

Work Order Processing PM_WO_300

Work Order Processing Training Environment

Plant Maintenance uses a GuiXT (graphical user interface) that changes the look of the IRIS/SAP screens. On the Main Menu screen it adds push buttons on the left side of the screen. You can use these buttons to get to various transactions once your training is complete but during training please do not use the push buttons to navigate to the various transactions we will use.

Main Menu screen without the GuiXT activated

Main Menu screen with the GuiXT activated

GuiXT Activation

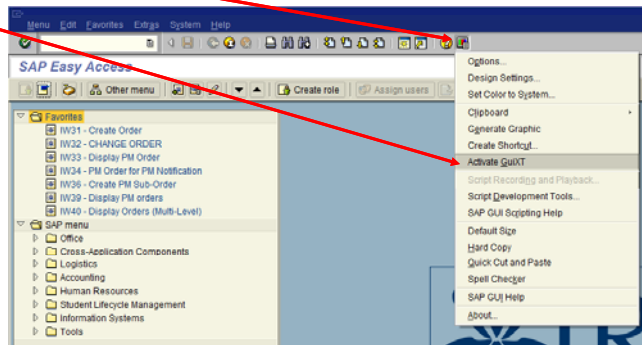

If your screen does not show the push buttons on the left side of the screen you will need to activate the GuiXT by following these steps:

Click on the **Customize Local Layout** icon on the standard toolbar.

Click **Activate GuiXT**

Press **Enter**

This will activate the GuiXT and your screen should now show buttons on the left side of the screen.

Work Order Processing PM_WO_300

Plant Maintenance IRIS Project Goals

- Integrate Plant Maintenance with Finance, Human Resources, and Materials
- Allow enhanced scheduling and planning for work assignments
- Provide work scheduling as well as management reporting tools
- Improve automated updates to customers about the status of work
- Implement a Preventive Maintenance system for buildings, areas, and equipment
- Use standard SAP functionality to collect utility use and cost information for recharge calculations

Unit 1

Work Planning Overview

Work Order Processing PM_WO_300

The “Plants” in Plant Maintenance

- The **Maintenance** Plant
 - ◆ Represents the **physical** facility
 - ◆ The entire UK campus: buildings and grounds
 - ◆ Represents the place where maintenance materials are kept
 - ◆ Always **UK10**

- The **Planning** Plant
 - ◆ Organizational in nature
 - ◆ There are 4 main Planning Plants:
 - Main Campus PPD (CPPD),
 - Medical Center PPD (MPPD), and
 - Housing (HOUS)
 - Capital Project Management Division (CMPD)
 - ◆ Work groups are grouped by plant

Functional Locations

- The Functional Location identifies the physical location of a building, room, elevator, stairway, equipment, etc.

- The Structure of the Functional Location is as follows:
 - ◆ The first level would be the “campus” (LX-)
 - ◆ The next level is the building (LX-xxxx)
 - ◆ The next level is the floor (LX-xxxx-xx)
 - ◆ The next level is the room (LX-xxxx-xx-xxx)
 - ◆ There is a separate structure for **Grounds** (exterior space)

Work Order Processing PM_WO_300

Functional Location Structure - Example

- Click through the following example to see how a location, room 72 in McVey Hall, is identified by the functional location.
- The Building: LX-0045
McVey Hall
- The Floor: LX-0045-00
McVey Hall, basement,
- The Room: LX-0045-00-72
McVey Hall, basement, room 72

How Functional Locations are Used

- Maintenance repairs and work requests are written referencing the functional locations.
- Work orders may be listed by functional location or rolled up to the organizational area (CPPD, MPPD, HOUS, CMPD).
- Accounting information for chargeback is automatically assigned to the work order from the functional location. (This may be overridden if required.)
- Statistical reporting will provide summary work order counts and costs at the functional location or the organizational level(s) above it.
- Equipment may be assigned to a functional location.

Work Order Processing PM_WO_300

Unit 1 Check for Understanding

Unit 2

Work Orders Overview

Work Order Processing PM_WO_300

What is a Work Order?

- A work order is a **financial** and **work management** transaction used to plan and charge labor, stock materials, non-stock purchases, and services
- It is integrated with Financials, Materials Management, and Human Resources in the IRIS system
- A Work Order may be created **from** a Notification or **without** an existing Notification
- Multiple Notifications can be turned into **ONE** Work Order

Why are Work Orders used?

Work Orders are used:

- To plan and schedule work
- To accumulate charges for work that will be recharged to others
- To document the costs of an event
- For Preventive Maintenance work

Work Order Processing PM_WO_300

Who Creates Work Orders?

- This function will be used **primarily** by the Dispatch area (**Work Control Centers**) to create orders to initiate work to be done.
- Authorized users responsible for creating orders for their area will also have access to create work orders in IRIS.

Required Information on a Work Order

- **Order Type** - A four-character code used to distinguish the different work order types.
 - ♦ Examples: REPR = Corrective Repair; RENV = Renovation
- **Priority** - An indicator of when this work should be scheduled.
 - ♦ Examples: Daily Operations; Emergency
- **Object to be maintained** – Functional Location or Equipment
 - ♦ **Functional Location** - Place where the work is to be performed; i.e., a building, floor, room, or exterior (Grounds)
 - Example: LX-0030-01-104 = 104 Student Center (0030=Student Center, 01=First Floor, 104=Room 104)
 - ♦ **Equipment** –Can be located at a Functional Location
 - Example: H-222 Ice Maker

Work Order Processing PM_WO_300

Optional Information on a Work Order

- **Description** – Text describing the work that is to be done; this can include “long text” of unlimited length
 - ◆ Examples: Repair thermostat; Fix broken window
- **Work Duration** – Number of hours of planned labor
 - ◆ Example: 2 H (2 hours)
- **Main Work Center** = 2 fields
 - ◆ Field 1 - **Initially created “Unassigned”** – but could be changed to the Work Center or individual responsible for maintaining the order, equipment, etc. -
 - ◆ Field 2 - The responsible planning plant - based on the Functional Location.

Other Work Order Information

- **Person Assigned** – could be someone with a specialty in a certain area
- **Materials** – parts and supplies needed to perform the work
 - ◆ Planned labor and materials
 - ◆ Actual labor and materials costs
- **Special Conditions** – Examples: may have to wait to do work when patient leaves Hospital room or when students leave residence hall, or may be hazardous materials in the area

Many of these items are added later as additional planning is performed for more complex work orders.

Work Order Processing PM_WO_300

Unit 2

Check for Understanding

 UNIVERSITY OF KENTUCKYWork Order Processing PM_WO_300_LSO_v123

Exercise 1

To set up your PC to practice the transaction(s) discussed in this course, refer to:

Exercise 1 – Preparing to Use the IRIS Training Sandbox

as detailed in the **PM_WO_300 Practice Guide.**

 UNIVERSITY OF KENTUCKYWork Order Processing PM_WO_300_LSO_v124

Work Order Processing PM_WO_300

Exercise 2

To practice the transaction(s) discussed in this unit, refer to:

Exercise 2 – Display a Work Order – IW33

as detailed in the PM_WO_300 Practice Guide.

Unit 3

Creating a Work Order

Work Order Processing PM_WO_300

Creating Work Orders

Work Orders can be created in a number of ways.

They can be created:

- Directly using Transaction code IW31
- Directly from a Notification with Transaction code IW22
- Using a Notification with Transaction code IW34
- Using more than one Notifications with Transaction code IW34

Create a Work Order – Transaction Code IW31

There are 3 required fields on the Create Work Order Initial screen:

- Order Type
- Priority
- Functional Location or Equipment

You can type entries directly into the fields or select them from possible entries.

Work Order Processing PM_WO_300

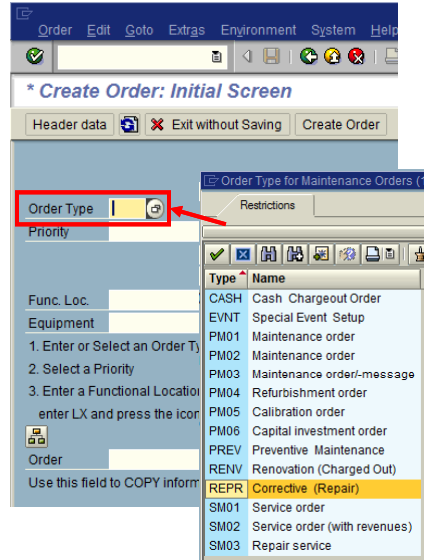

Work Order – Order Types

Enter the Order Type or select one by clicking on the Possible Entries icon.

From the list of possible Order Types, double-click on the one you want to use.

Notice that the last entry in the Possible Entries list is labeled Type SM03 – Repair Service but Type **REPR – Corrective (Repair)** is the correct one to used.

Work Order Types and Examples

The table below shows the five Order Types used and an example of each

Type	Description
CASH	Cash Charge out Order Example: Fraternity Work
EVNT	Special Event Example: Commencement
PREV	Preventive Maintenance Example: Oil HVAC regularly
RENV	Renovation (Charged Out) Example: Install new bathroom
REPR	Corrective (Repair) Example: Repair hinge on door

Work Order Processing PM_WO_300

Priority

To enter the Priority, click on the drop-down icon  in the Priority field to see the available choices.

Each priority has a specified time span for the work. The time span indicates when the work needs to be performed and is incorporated in the Work Order.

Select the appropriate priority.

Priority and Time Spans for Work Orders

The table below shows the start and end times for various priorities for all the areas in Facilities.

Description	Start	End
Emergency	10 Min	24 Hours
General Maint.	7 Days	30 Days
Schedulable Maint.	7 Days	30 Days
Daily Operations	1 Day	2 Days
Research Fac.	1 Hour	4 Hours
Patient Care	1 Hour	4 Hours
Elect. Improv.	3 Days	10 Days
Renovations	-	-

Work Order Processing PM_WO_300

Functional Location

If you know the Functional Location you can enter it directly into the field.

If you do not know the Functional Location, you can either click on the:

- Possible Entries icon, or
 - Structural List icon
- to search for it search.

We will cover both methods.

Click on the Possible Entries icon.

The screenshot shows a SAP form with the following fields and instructions:

- Order Type: REPR
- Priority: D Daily Operations
- Func. Loc.: [Empty field with a magnifying glass icon]
- Equipment: [Empty field]
- Order: [Empty field]

Instructions below the fields:

1. Enter or Select an Order Type (REPR, RENV, etc.)
2. Select a Priority
3. Enter a Functional Location. If this is not known, enter LX and press the icon below.

Use this field to COPY information from an existing order.

Red arrows point from the text on the left to the magnifying glass icon in the 'Func. Loc.' field and the 'Possible Entries' icon (a small square with a magnifying glass) below the 'Order' field.

Functional Location Possible Entries

The screenshot shows the 'Functional Location (1)' dialog box in SAP. It has three tabs: 'Asset', 'Cost center', and 'Uppermost FunctLocs by StructIndicator'. The 'Asset' tab is active. The fields are:

- Asset: [Empty field]
- Subnumber: [Empty field]
- Company Code: UK00
- Functional Location: [Empty field]
- Maximum No. of Hits: 500

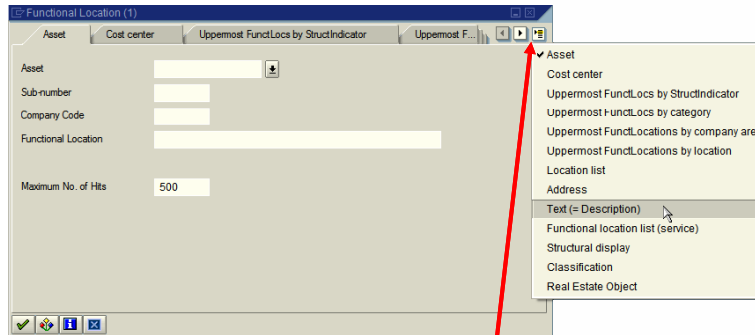

At the bottom left, there are icons for 'Possible Entries' (a magnifying glass), 'Structural List' (a tree icon), and 'Copy' (a document icon).

The Possible Entries function is used throughout SAP to search for what could “possibly go into” a particular field. It is a very valuable and helpful technique to understand.

The first time you click on Possible Entries from any field, the Functional Location search box will appear. If it is a tab format, it will open to the first tab. It does this because it does not know yet how you like to search from that particular field.

Work Order Processing PM_WO_300

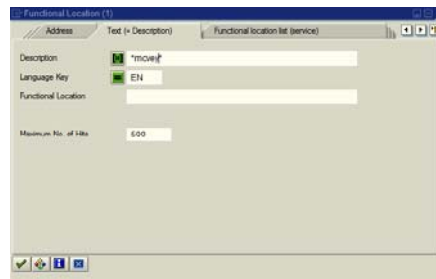

Functional Location Possible Entries (con't)

The easiest way to change tabs is to click on the tab list icon. This shows you all the tabs that are available. You simply click on the tab you want.

Click on the Text (= Description) tab.

Search with Possible Entries

Now that you are on the Text (= Description) tab, enter your search text in the Description field.

Remember to use the asterisk (*) as the wildcard character to expand your search criteria and since you do not know how entries will be listed, it is best to start with asterisks on each side of the entry...Example: You need the Functional Location for 72 McVey Hall. Enter *mcvey* for McVey Hall.

Do not use any spaces since they will become part of your search criteria.

Once your search criteria is entered press the Enter key.

Work Order Processing PM_WO_300

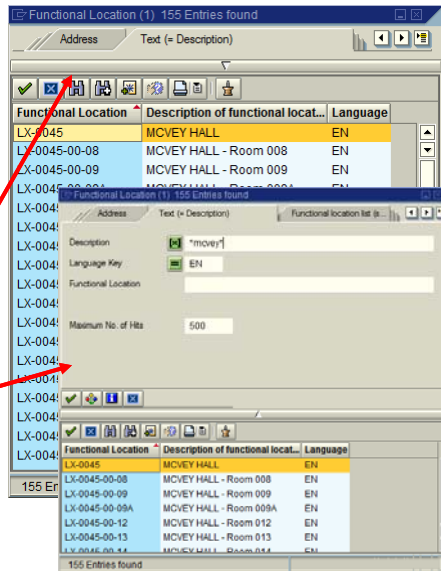

Possible Entries Results

The Functional Locations that match your query will be displayed and the results are always sorted by the first column. In the example all locations with mcvey in the description are shown.

If you need to tweak your search criteria to either expand or reduce the number of entries found, click the bar under the tab headings.

The original search criteria will be displayed and can be changed.

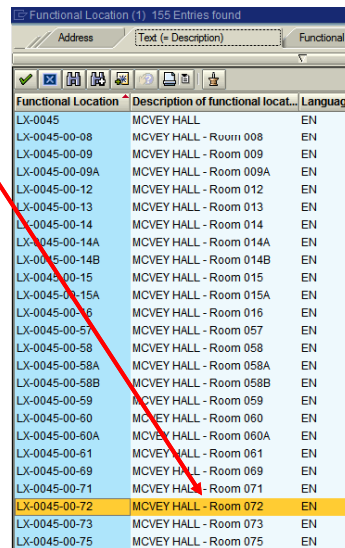

After you press enter the new results will be displayed.

Possible Entries Results (con't)

In this example you needed the Functional Location for 72 McVey Hall.

When you locate the Functional Location you need, double-click on it to populate the Functional Location field on the Create Work Order screen.

Work Order Processing PM_WO_300

Functional Location Structure List

Another method to search for a Functional Location is the Structure List.

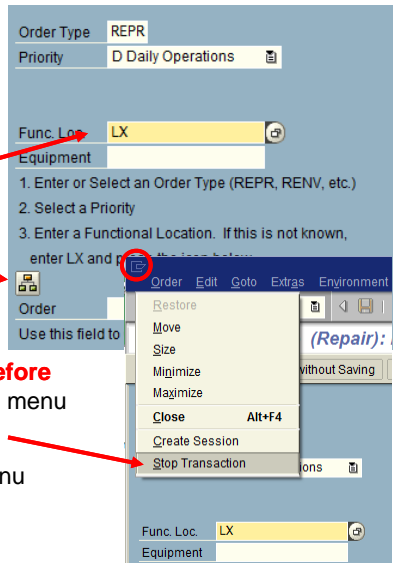

To see the **complete** Functional Location Structure, **enter LX first** and **then click** the Structure List icon

The list will take a while to open.

NOTE: If you click the Structure List icon **before** you enter lx in the field, click the application menu to open it and then click **Stop Transaction**.

This will take you back to the main SAP Menu screen and you will need to start over.

Create Order: Structure List

Once the Structure List appears you will be able to see all Functional Locations and Equipment Locations.

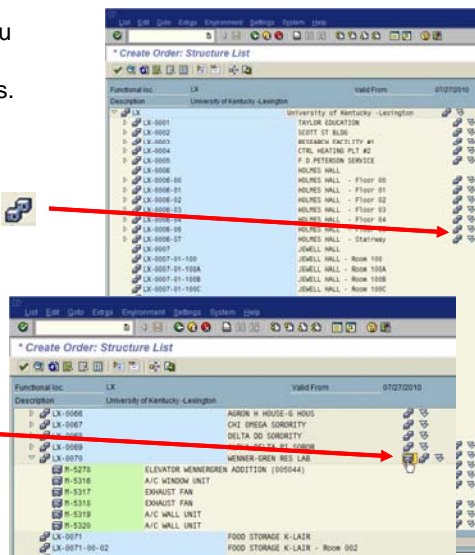

You can expand and collapse locations as needed by clicking the triangles or the FunctLocation icon

You can expand and collapse equipment as needed by clicking the equipment icon

Clicking the double arrows shows all objects.

Work Order Processing PM_WO_300

Create a Work Order – IW31

* Create Order: Initial Screen

Header data Exit without Saving Create Order

Order Type REPR

Anatomy of a Work Order

The screenshot shows the SAP Work Order processing interface. Red arrows point to various fields and icons with labels:

- Save**: Points to the 'Save' icon in the top toolbar.
- Save and Exit**: Points to the 'Save and Exit' icon in the top toolbar.
- Release and Save**: Points to the 'Release and Save' icon in the top toolbar.
- Order Type/Number**: Points to the 'Order' field containing 'REPR 80700000520' and the description 'leak in faucet valve'.
- Description**: Points to the description field.
- To add more detail to the description**: Points to the 'Create Text' icon (a pencil) next to the description field.
- Main Work Center**: Points to the 'Mn.wk.cdr' field containing 'UNASSIGN / CPPD'.
- Basic start and end times**: Points to the 'Bsc start' and 'Basic fin.' fields.
- Functional Location**: Points to the 'Func. Loc.' field containing 'LX-0045-00-71'.
- Priority**: Points to the 'Priority' dropdown menu.
- Work Center Plant**: Points to the 'Mn.wk.cdr' field.
- Planned Labor Required**: Points to the 'Labor Reqd' field in the 'First operation' section.

UK UNIVERSITY OF KENTUCKY Work Order Processing PM_WO_300_LSO_v1 43

Create a Work Order – Description

The screenshot shows the SAP Work Order processing interface for creating a new work order. A red circle highlights the 'Create Text' icon (a pencil) next to the description field. Red arrows point from the text to the icon and the description field.

In this unit you will only enter a short description and planned labor.

Enter a description of the work.

To add more detail, click on the **Create Text** icon.

UK UNIVERSITY OF KENTUCKY Work Order Processing PM_WO_300_LSO_v1 44

Work Order Processing PM_WO_300

Create a Work Order – Planned Labor

For planning purposes it is suggested that you enter an estimate of the labor time required. 2 hours were entered on this order.

After entering planning time, click either on the **Save** icon  or the **Save and Exit** push button  to save the order.

Work Order Number

The 12 digit Work Order number is displayed in the lower-left corner of the screen. As soon as you click somewhere the number will disappear.

Only REPR (Corrective Repair) Work Orders are saved with a notification number (background system “paperwork”)

All other Work Orders are saved without a notification number.

Until the Work Order is released it can not be worked and any components will not be staged or ordered.

Work Order Processing PM_WO_300

Notifications and Work Orders

- A Notification is a **non-financial transaction** that is used to report a problem, request work, or record an event or activity. It is purely **informational** in nature.
- A Work Order is a **financial and work management transaction** that is used to **plan and charge** labor, stock materials, non-stock purchases, and services.
- Not all areas in Facilities use Notifications.

The screenshot shows the 'Display PM Notification: Facilities Request' window. The notification ID is 10000127, with the description 'FR Banister is off the wall'. The status is 'NOPR ORAS'. The order number is 897000000000. The reference object is 'UK:0005-ST:ST0001N' for 'F.D PETERSON SERVICE - Room ST0001N'. The planner group is 'C3R / UK18' and the main work center is 'UNASSTGN / CPPD'. The notification was reported on 03/12/2007 at 10:55:16. The required start and end dates are 03/13/2007 and 03/14/2007, respectively, with a priority of 'D Daily Operations'.

A notification is typically the what, where, and contact info.

Create Work Order from Notification – IW34

- A Work Order can be created from an existing Notification by using transaction code IW34.
- This function can be used after looking at a list of Notifications to create an order to do the work.
- One Work Order can be created for multiple Notifications. For example, if 10 Notifications are received for the same power outage, only one Work Order is really needed.
- To create a work order from a notification using IW34 the following information is required:
 - ♦ **Order Type** – A four-character code used to describe an order type
 - ♦ **Priority** – Indicates when the work should be scheduled
 - ♦ **Notification** (number) – The number assigned to the notification by the system when the notification was created

Work Order Processing PM_WO_300

Required Fields – IW34

Click on the Possible Entries icon to see the list of Order Types and double-click the one you want.

Type the Notification number in the Notification field. If you do not know the number, click on the Possible Entries icon to search for it.

Click the drop-down icon in the Priority field to see the choices, and then click on the one you want.

Work Order Created from Notification – IW34

**No matter how a Work Order is created...
A Work Order is a Work Order.**

When all the required fields are complete, press the Enter key or click on the Enter icon and the Work Order is created.

Work Order Processing PM_WO_300

Create Work Order Directly from Notification – IW22

On IW22 type the Notification number in the Notification field.

If you do not know the number, click on the Possible Entries icon to search for it.

When the Notification appears click the Create Order icon

Enter the Order Type on the Create Order dialog box that appears and press Enter.

Work Order Created Directly from Notification – IW22

**No matter how a Work Order is created...
A Work Order is a Work Order.**

If an Object Information box appears, just press Enter to get to the Work Order.

Work Order Processing PM_WO_300

Creating a Sub-order – IW36

- Sub-orders are typically used to break a project into units by craft or shop. Each shop can estimate its costs on a sub-order and these can be tracked at the sub-order and superior order level.
- A sub-order is a work order that has a link to a “superior” order.
- The actual costs of sub-orders may be viewed from the “superior” order
- The costs of the sub-orders may either settle to the superior order or directly to another cost object.
- Sub-orders may have sub-orders.
- To create a sub-order, a work order needs to be identified as the superior work order.

Create Sub-order – IW36

Using IW36 enter the:

- Order Type
- Priority
- In the Superior Order field enter the work order number for the work order that will be identified as the superior work order.

Header data

Work Order Processing PM_WO_300

Unit 4

Changing Work Orders

Change a Work Order – IW32

- You may need to modify an existing work order to change any of the following:
 - ♦ Description of the Work
 - ♦ Functional Location
 - ♦ Work Duration
 - ♦ Components
 - ♦ Person or Work Group Assigned
 - ♦ And other information

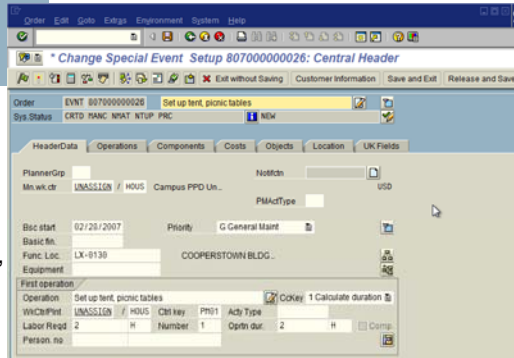

Work Order Processing PM_WO_300

Change a Work Order – IW32

In IW32 enter the Order number in the Order field and press Enter. The work order is displayed ready to be changed.

If you do not know the Order number, click on the Possible Entries icon to search for it.

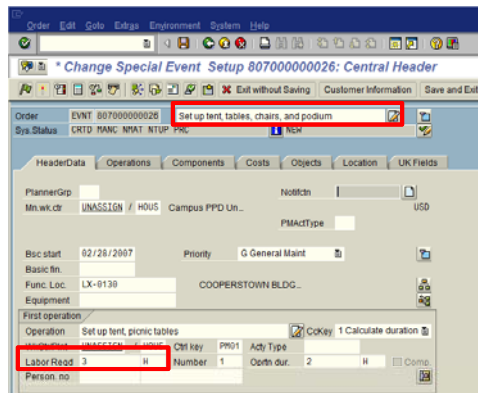

Change a Work Order – IW32

In this example we needed to add “chairs, podium” to the work description and increase the Labor Required from 2 hours to 3 hours.

Remember, you can also change:

- Functional Location
- Add Components
- Person or Work Group Assigned
- And other information

When you have completed all the changes, click the save icon. The Work Order is saved with its original number and is displayed in the lower-left corner of the screen.

Work Order Processing PM_WO_300

Materials and Inventory

- Materials Management Inventory replaced Stores Inventory Systems
- On-shelf inventory should be kept to a minimum
- We are utilizing “just-in-time” inventory (parts are requisitioned daily)
- There are stock, non-stock, and non-file materials
- Materials may be planned (used on a routine basis) and unplanned
- Stock and non-stock materials will be identified by numbers in IRIS
- Non-file materials are not identified by numbers in IRIS

Types of Components

- **Stock materials:**
 - Parts are kept on hand and
 - have IRIS material numbers
- **Non-stock materials:**
 - Parts which are used less frequently
 - they are ordered as needed from suppliers and
 - have IRIS material numbers
- **Non-file materials:**
 - Parts are ordered as needed and
 - **do not** have IRIS material numbers
 - remember non-file means “not on file”
- **Services:** Services provided by external companies and are requested as needed
- **Text Items:** Text Items are instructions or comments about materials required for a work order, such as a note to bring a ladder or supplies like electrical tape.

Work Order Processing PM_WO_300

Planned Materials on a Work Order

- Planning a **STOCK material** results in a **Reservation** being created in the Storeroom.
 - ♦ The Storeroom can then pick, stage, and deliver the materials as required.
- Planning a **NON-STOCK material** results in a **Reservation** being created in the Storeroom and in the **automatic** creation of a Purchase **Requisition**.
 - ♦ The requisition is processed by Purchasing and materials are delivered to Central Stores. The Storeroom can then pick, stage, and deliver the materials as required.
- Planning a **NON-FILE material** results in a **Reservation** being created in the Storeroom and in the **manual** creation of a Purchase **Requisition**.
 - ♦ The requisition is processed by Purchasing and materials are delivered to Central Stores. The Storeroom can then pick, stage, and deliver the materials as required.

Unplanned Materials on a Work Order

- Unplanned stock materials may be issued directly to a work order.
 - ♦ Storeroom personnel will issue the material and charge it to the work order number.
 - ♦ The name of the person receiving the material is also recorded.

Work Order Processing PM_WO_300

How to plan stock materials

There are several ways to select the materials:

- Enter the component number, if known
- Use **Possible Entries** to search to find the part number or description.
 - ♦ Asterisks are used as “wildcards” in a search to let you search using partial information.
 - ♦ Examples: *bearing* will find all materials with “bearing” anywhere in the description; *filter*16* will find all materials with “filter” and “16” in the description (such as Filter, Air, 16x20x1)
 - ♦ For more detailed information using Possible Entries see the Functional Locations slides earlier in this course.

Planning Materials on an Order

To add materials to an order, click on the Components tab.

The **Components** tab of a Work Order is displayed

Item	Component	Description	LT	Reqmt Qty	UM	IC	SLoc	Plnt	OpAc	Proc. Category
0010								UK10		
0020								UK10		

Item	Sequential number on the list
Component	The component number in IRIS
Description	Text describing the component
Reqmt Qty	Quantity required for the work
UM	Unit of Measure, such as EA for each
IC	Item Category; Stock, Non-stock, Non-file, etc.
SLoc	Storage Location
Plnt	Plant; always UK10

Planning Stock Materials

* Change Corrective (Repair) 80700000520: Component Overview

Order REPR 80700000520 Leak in faucet valve

System Status CRTD MANC NMAT PRC NEW

Item	Component	Description	LT	Reqmt Qty	UM	IC	SLoc	Plnt	OpAc	Proc. Category
0010								UK10		
0020								UK10		

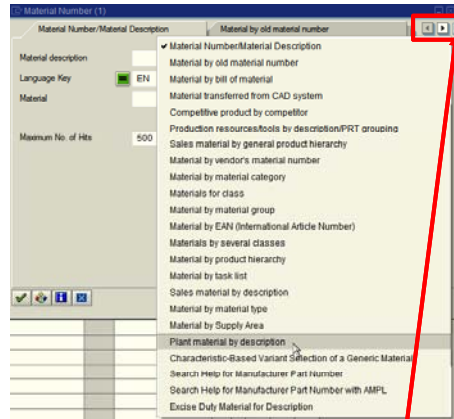

The component field is used for the **IRIS Component number** for both stock and non-stock items.

If you know the component number, enter the number in the field.

If you do not know the component number, use **Possible Entries to search** for the number.

Work Order Processing PM_WO_300

Planning Materials – Possible Entries

When the Possible Entries search box appears click the list icon and choose the **Plant Material by description** tab to search for components by a description.

Planning Materials – Search by Description

We need to plan a faucet on the work order.

Since we are not sure where in the description the word faucet appears, we use the wildcard character (the asterisk) both in front and in back of the word faucet...i.e. ***faucet***, to search for all materials with the word **faucet anywhere** in the description.

Work Order Processing PM_WO_300

Planning Materials – Search Results

Material Number (1) - 4 Entries found

Material by Supply Area Plant Material by Description UK Material Search

Material description	Language	Material	Plant
FAUCET KOHLER, K8924 ROLLUGH BRASS	EN	304710	UK10
FAUCET, KITCHEN, 1 HANDLE, DELTA, 100WF	EN	304686	UK10
FAUCET, LAVATORY, DELTA, 501	EN	304741	UK10
FAUCET, LAVATORY, ZURN, 4"	EN	310090	UK10

The search results appear.

The faucet we need to plan is the Delta 501. Double-click the Delta 501 faucet to **enter** the component number in the component field.

Order REPR 807000000520 Leak in faucet valve

Sys.Status CRTD MANC NYAT PRC NEW

HeaderData Operations Components Costs Objects Location UK Fields

Item	Component	Description	LT	Reqmt Qty	UM	IC	SLoc	Plant	OpAc	Proc. Category
0010	304741							UK10		
0020								UK10		
0030								UK10		

Planning Stock Materials

Order REPR 807000000520 Leak in faucet valve

Sys.Status CRTD MANC NYAT PRC NEW

HeaderData Operations Components Costs Objects Location UK Fields

Item	Component	Description	LT	Reqmt Qty	UM	IC	SLoc	Plant	OpAc	Proc. Category	
0010	304741	FAUCET, LAVATORY, DELTA 501			1	EA	L	0001	UK10	0010	Reservation for Order
0020								UK10			
0030								UK10			

Once the component number is entered you only need to enter the quantity required and press enter to complete the entry.

When you press enter, the system checks for the component number in the Master Data file. The system then automatically populates the Description, Unit of Measure, Item category, and stocking information fields.

Repeat entering the component field, required quantity, and pressing enter for each Stock Material you want to plan.

Work Order Processing PM_WO_300

Planning Non-Stock Materials

Order REPR 80700000520 Leak in faucet valve

Sys.Status CRTD MANC NMAT PRC NEW

HeaderData Operations Components Costs Objects Location UK Fields

Item	Component	Description	LT	Reqmt Qty	UM	IC	SLoc	PInt	OpAc	Proc. Category
0010	304741	FAUCET, LAVATORY, DELTA 501		1	EA	L	0001	UK10	0010	Reservation for Order
0020	310090	FAUCET, LAVATORY, ZURN, 4"		1	EA	N		UK10	0010	PRReq for Order
0030								UK10		

To plan a non-stock component the process is the same... You enter the component number, the quantity required and press enter to complete the entry.

The only difference between a stock and non-stock component is one is kept on hand in stock and the other is ordered as needed.

The IC (Item Category) column shows the stock and non-stock status.

The system has all the information necessary to *automatically* start the purchase requisition process to order the non-stock component.

IC	Item category te...
C	Compatible Unit
L	Stock item
M	Intra material
N	Non-stock item
R	Variable-size item
T	Text item

Planning Non-file Materials

Order REPR 80700000520 Leak in faucet valve

Sys.Status CRTD MANC NMAT PRC NEW

HeaderData Operations Components Costs Objects Location UK Fields

Item	Component	Description	LT	Reqmt Qty	UM	IC	SLoc	PInt	OpAc	Proc. Category
0010	304741	FAUCET, LAVATORY, DELTA 501		1	EA	L	0001	UK10	0010	Reservation for Order
0020	310090	FAUCET, LAVATORY, ZURN, 4"		1	EA	N		UK10	0010	PRReq for Order
0030		Delta Faucet Diverter RP6073		1	ea			UK10		
0040								UK10		

For a non-file component, first enter a description, quantity, and unit of measure and then press the Enter key. A Detail Purchasing dialog box appears.

Although the only required field is the **Price** field you should complete as many fields as possible. Purchasing will use this information to order the non-file component needed. If you are planning Services remember to change the Material Group.

Change Connective (Repair 80700000520, Component Detail Purchasing)

Requirement Qty	1	EA	Sort String	
Price	0.00	per	GL Account	1 EA
Material Group	PR000001		Vendor	
Purch. group	000 UK30		Info Record	
Agreement	/ 0		Unloading Point	
Goods Recipient			Tracking Number	
Requisitioner			GR Proc. Time	
Pl. Deliv. Time				
Vendor Mat. No.				

Work Order Processing PM_WO_300

Purchasing Information – Reference Only Slide

Information required to order non-stock materials:

- **Requirement Quantity** – How many are needed? (defaults from quantity entered on the Components tab)
- **Price** - Cost of material
- **Material Group**
 - ♦ System defaults to PM000001 for PM Non-Material Master Material
 - ♦ If requesting services change to PM000002 for PM Non-Material Master Service
- **Purchasing Group** – Defaults to 000 / UK00
 - ♦ 000 = Work Order / UK00 = Purchasing
- **Goods Recipient** – Who should receive the material?
- **Requisitioner** – Who is requesting the material?
- **Unloading Point** – Where should material be delivered?
- **Vendor Material Number** – Description of the material

Adding a Text Component

Item	Component	Description	LT	Reqmt Qty	UM	IC	SLoc	Plnt	OpAc	Proc. Category
0010	304741	FAUCET, LAVATORY, DELTA 501		1	EA	L	0001	UK10	0010	Reservation for Order
0020	310090	FAUCET, LAVATORY, ZURN, 4"		1	EA	N		UK10	0010	PRReq for Order
0030		Delta Faucet Diverter RP6073		1	EA	N		UK10	0010	PRReq for Order
0040		Bring a 9 foot ladder				T		UK10		
0050								UK10		

To enter a text item (additional instructions), enter the information in the description field and enter a "T" in the Item Category field (see line 0040)...then press enter.

If you press enter before entering the "T" in the Item Category field the system will assume you are entering a non-file item.

IC	Item category te...
C	Compatible Unit
L	Stock item
M	Intra material
N	Non-stock item
R	Variable-size item
T	Text item

Also notice that the non-file item on line 0030 does not have a component number. The reason is that the system does not have any information about the item...i.e. non-file equals "not on file".

Work Order Processing PM_WO_300

Planned Cost Display

When you Save the Work Order, all Costs are calculated automatically.
To see the calculated cost now, select the Cost tab.

Item	Component	Description	LT	Reqmt Qty	UM	IC	SLoc	Plnt	OpAc	Proc. Category	
0010	304741	FAUCET, LAVATORY, DELTA 501			1	EA	L	0001	UK10	0010	Reservation for Order
0020	310090	FAUCET, LAVATORY, ZURN, 4"			1	EA	N		UK10	0010	PReq for Order
0030		Delta Faucet Diverter RP6073			1	EA	N		UK10	0010	PReq for Order
0040		Bring a 9 foot ladder				ST	T		UK10	0010	Text for Order

Calculating Planned Components Cost

Group/Descrptn	Est. costs	Plan costs	Act. costs	C...
Costs	0.00	23.45	0.00	U...
Labor	0.00	23.45	0.00	U...

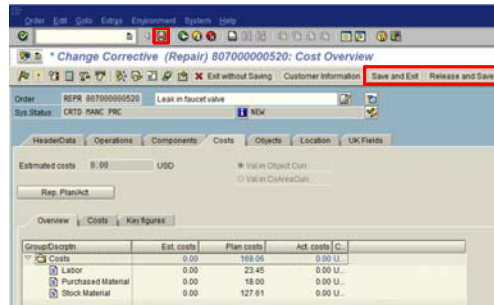

Notice that only the initial planned labor cost are currently shown on the Cost tab. When the Work Order was saved, those cost were calculated. To see the additional calculated cost (the components just entered) now you need to refresh the screen. To do this click on the **Determine Costs** icon. This will calculate all cost items that were added to the work order since the last time it was saved.

Work Order Processing PM_WO_300

Planned Components Cost

After clicking the Determine Costs icon all cost items are displayed.

When you have finished adding Components, click either on the **Save** icon  or the **Save and Exit** push button .

The work order is saved with the same work order number and all cost items are calculated and saved.

Until the Work Order is released it can not be worked and components will not be staged or ordered. If the order is to be released now, click on the Release and Save push button. 

Unit 5 Check for Understanding

Work Order Processing PM_WO_300

Exercise 4

To practice the transaction(s) discussed in this unit, refer to:

Exercise 4 – Add Components to a Work Order – IW32

as detailed in the PM_WO_300 Practice Guide.

Unit 6

Work Order List Displays

Work Order Processing PM_WO_300

Work Order List Displays in IRIS

- List Displays can help manage work. You can specify criteria and produce lists of work orders for planning and analysis.
- Selection screens and variants can narrow your requests for information.
- Drill-down (double-clicking an item) functionality can provide detail.
- In this unit we will look at 2 list displays:
 - ♦ List Display Orders – IW39
 - ♦ Multi-Level Order List Displays – IW40

List Display Orders – IW39

To display specific work orders, you can set criteria such as Order Status, Type, and/or Functional Location, etc.

To search in any field, click on the Possible Entries icon for that field.

In this example we want to display a list of REPR (Repair) Work Orders that are Outstanding (Not Released) or In process (Released) for the date period showing.

After entering all your criteria, click the execute icon

Download Data to Spreadsheet

* Display PM orders: List of Orders

S	Order	Type	Bsc start	Description	PlanTotCos	ActTotCost	Functional location
	807000000000	RE...	02/20/2007	Test Repair Order	54.02	0.00	LX-0005
	807000000001	RE...	02/20/2007	Test Repair Order	54.02	0.00	LX-0005
	807000000002	RE...	03/11/2007	Test derivation rules and stuff	6.18	23.45	LX-0005

To download the data to an Excel spreadsheet follow these steps:

- When the list is displayed, click on the **Spreadsheet** icon. 
- You will be prompted to "Enter number of key columns."
You can leave it unchanged at 1.
- You will be prompted to choose "Table" or "Pivot Table".
Choose **Table** and click on the **Continue** icon. 
- You will be prompted to save to MS Excel.
Click on the **Continue** icon.
- Be patient. The data will appear in an Excel spreadsheet and you can format, save, and use it as you wish just as any other Excel spreadsheet.

Work Order Processing PM_WO_300

Multi-Level Order List Display – IW40

- A multi-level order list allows more detailed information.
- Use this function to view an order from a list to see more detail, such as any sub-orders or labor costs associated with the order.

Multi-Level Order List Display – IW40

Similar to IW39, to display specific work orders, you can set criteria such as Order number, Type, and/or Functional Location, etc.

To search in any field, click on the Possible Entries icon for that field.

In this example we are searching for all outstanding and in progress work orders for the date period showing.

After entering all your criteria, click the execute icon

Work Order Processing PM_WO_300

Multi-Level Order List Display – IW40

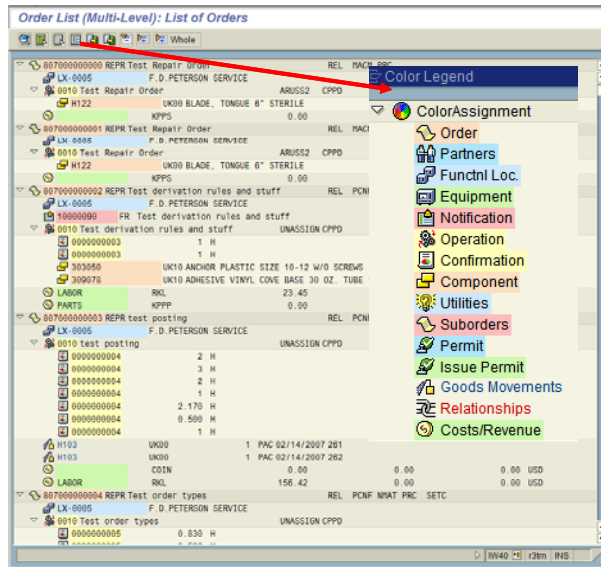

The Order information is displayed.

To see anything in more detail just double click the item...examples:

Double click a work order to open it.

Double click a functional location to see the master data

The legend is also shown.

Unit 6 Check for Understanding

Work Order Processing PM_WO_300

Exercise 4

To practice the transaction(s) discussed in this unit, refer to:

Exercise 5 – Change Layout of Order List Display – IW39

as detailed in the PM_WO_300 Practice Guide.

Course Summary

You should now have an understanding of:

- Creating Work Orders
- Creating Sub-orders
- Changing Work Orders
- Materials
- Adding Components to Work Orders
- Work Order List Displays

Work Order Processing PM_WO_300
